

**MANDARIN  
PROTOCOL**

# **WHITEPAPER**

- Introduction
- Roadmap
- Tokenomics
- Presale info

Let's go folks!

# INTRODUCTION

**MDN** is a token which created for **communities** that aim to play an active role in the **crypto ecosystem** in order to make **Web3** more widespread all over the world. It is a project dedicated to the formation of a decentralized **internet and financial model** of its infrastructure by taking place in the **Web3 ecosystem**.

It was created by the **developer community** on **Arbitrum Chain** which one of the world's largest blockchain-based operating systems. Aiming to be one of the cornerstones of decentralized finance, **MDN** is a **community project** that aims to provide decentralized applications and solutions.

The first reflection token that automatically does buybacks, burns and adds liquidity on Arbitrum

It is deflationary with the auto buyback and burn Mechanism built-in!
